ABSTRACT

An effectiveness of new age strategies in digital marketing will help you take the right decisions to make a company successful online. A strategy process model provides a framework that gives a logical sequence to follow to ensure inclusion of all key activities of strategy development and implementation. A successful Digital Strategy should be built on reviewing 7 core capabilities which are strategic approach, performance improvement process, management buy-in, resourcing and structure, data and infrastructure, integrated customer communications and customer experience.

This project is done with only rage communications. This project survey has taken for only employees of rage communications. This project is does not applicable for any other digital marketing services. The study has been under taken to identify the employee perception towards service rendered by rage communications.

Marketers are faced with new challenges and opportunities within this digital age. Digital marketing is the utilization of electronic media by the marketers to promote the products or services into the market. The main objective of digital marketing is attracting customers and allowing them to interact with the brand through digital media. This article focuses on the importance of digital marketing for both marketers and clients. This study has described various forms of digital marketing, effectiveness of it and the impact it has on firm's sales. Collected data has been analyzed with the help of various statistical tools and techniques.

ACKNOWLEDGEMENTS

We express our deep sense of gratitude to our Project Supervisor, Mr. Rabi Kumar Patnaik, Lecturer in Commerce, Wesley Degree College Co-Ed, Osmania University, who has guided the present project work with scholarly advice and meticulous care. In spite of his multifarious academic responsibilities, he has been kind enough to spare his valuable time for consultation and guidance. It has been an immense pleasure and privilege to work under him.

We express our profound gratitude to Prof. Dr.B.Vimal Sukumar, Principal for his parental concern, support, encouragement and invaluable suggestions given to us in our project work.

We wish to record our deep sense of gratitude to Dr.Raygani Pathi, Head, Department of Commerce, Wesley Degree College Co-Ed, Osmania University, for her motivation, valuable guidance and for being a pillar of support in completion of our study. We highly thankful to all our lecturers, for their words of wisdom, valuable suggestions and encouragement in our work.

We also thank our friends and classmates for their encouragement in this endeavour. We are thankful to all the persons who have directly or indirectly helped us in the completion of this research work. :

1. SIRIPURAM VISHNU VARDHAN

2. S.VARSHITHA

3. THOTA RAHUL

4. THUNIKI NIKHIL SAI

CHAPTER I

INTRODUCTION

INTRODUCTION

As generations evolve and technology develops, the advancement in the field of marketing and advertisements has been immense. No longer are businesses bound by the limitations of traditional marketing techniques. The old has been heavily replaced by the new. One of the newest and most effective strategies has been of online marketing

New age strategies for start ups and young companies with limited marketing budgets, digital marketing is perhaps the only cost-effective method to get their message out there and build a consumer base. RAGE COMMUNICATIONS is one of the fast growing sectors among the services. Barriers to entry and scaling up are miniscule compared to traditional media. In short – if it's done right, you can achieve a whole lot on a limited budget, which means it has levelled the playing field between big and small companies.

The challenge, however, is knowing how to do it right. The space itself, at least in India, is relatively young, so there are limited “role models” to emulate. Add to that the different strategies that work (or don't) for B2B and B2C firms, rapidly evolving technologies and methodologies, and it is only natural that there is no single path that start ups can take to achieve complete success with their digital marketing strategies.

For many young companies trying digital marketing for the first time, it is much like the elephant examined by six men in the dark – one states that an elephant is like a rope because it has held the animal's tail. Another thinks it is like a tree branch because it has felt the elephant's trunk. Others liken it to a fan (ears), or a wall (torso), or a plough (tusks). For the time being, digital marketing faces a deficit of practical, usable information, clear communication of learning's, the right talent, and the need to acknowledge different perspectives.

1.2 INDUSTRY PROFILE

1.2.1 Definitions of Digital Marketing

The term **digital marketing** was first used in the 1990s, but digital marketing has roots in the mid-1980s, when the Soft Ad Group, now Channel Net, developed advertising campaigns for automobile companies: People sent in reader reply cards found in magazines and received in return floppy disks that contained multimedia content promoting various cars and free test drives

The promotion of products or brands via one or more forms of electronic media. For example, advertising mediums that might be used as part of the digital marketing strategy of a business could include promotional efforts made via the Internet, social media, mobile phones and electronic billboards, as well as via digital and television and radio channels.

Digital marketing (also known as **data-driven marketing**) is an umbrella term for the marketing of products or services using digital technologies, mainly on the Internet, but also including mobile phones, display advertising, and any other digital medium.

Digital marketing techniques such as search engine optimization(SEO), search engine marketing (SEM), content marketing, influence marketing, content automation, campaign marketing, data-driven marketing and e-commerce marketing, social media marketing.

Digital marketing is a general term for any the effort by a company to connect with customers through electronic technology, including email, geo location and mobile marketing, social media, online customer communities, webinars and other video-based content.

1.2.2 Objectives of Digital Marketing:

Digital marketing objectives should be SMART (Specific, Measurable, Achievable, Relevant and Time Related) and it be should benchmarked against the competitors of the effectiveness. Here are 4 important objectives to include in marketing strategy:

1. INCREASE SALES

Increasing sales or leads is a top level digital marketing objective for many businesses because it improves revenues and is easy to measure. Using key performance indicators (KPI), we can then benchmark our progress towards achieving our objective and you can track this in your spreadsheets.

2. IMPROVE CONVERSION RATE

This is another digital marketing objective that can be tracked in Google Analytics. By setting up goal tracking in Analytics, we will have reports on conversions for our traffic sources, campaigns, keywords, landing pages, locations and so on.

3. PERCENTAGE OF RETURN VISITORS

The New vs. Returning visitors are a metric that is available in Analytics and it is easy to track. Knowing how many visitors return is an important objective because it helps us see how effective our business is at visitor and customer loyalty.

4. ORGANIC TRAFFIC VOLUMES

Organic traffic is natural traffic from the search engine result pages. It is considered as free traffic and is distinct from paid traffic. Lots of businesses have the objective to increase organic visitor traffic by achieving high search engine rankings through implementing search engine optimization.

1.2.3 Various functions of digital marketing:

It is not only a rapidly growing force in the current marketing playing field, it is set to be the future of marketing, and it seems likely that digital media will soon replace more traditional forms altogether. While older generations will no doubt lament the demise of paper-based newspapers, books, communication methods and traditional TV and radio broadcasts, those who have grown up with the internet and mobile phones as a God-given right are already embracing the brave new world of digital consumption.

The facts are that digital methods of communication and marketing are faster, more versatile, practical and streamlined, so it is perhaps unsurprising that once the technology become available we began quickly moving into the digital age. The good news is that digital offers just as much potential to marketers as it does to consumers.

1.2.4 Key forms of Digital Marketing:

- Websites and SEO content
- Blogs
- Internet banner ads
- Online video content
- Pay-per-click (PPC) advertising
- Email marketing
- Social media marketing (Facebook, Twitter, Linked In, etc.)
- Mobile marketing (SMS, MMS, etc.)

1.2.5 Future of Digital Marketing:

The advent of the digital marketing has opened up a novel landscape of doing business i.e. online business. According to a survey- by 2017, India will have around 600 million internet users that ultimately create a fascinating business opportunity to sell services and products to a growing population of tech-savvy internet users. Recently, booming prevalence of digital India campaign is also adding lots of new flavours and fervours to the future of digital marketing in India. Growing start up trend is another reason that plays significant role in creating a great scope of digital marketing in India.

The most common problem that start ups face is lack of funds and digital marketing can rescue them as the most cost-effective blessing in disguise. It is highly economical and equally powerful way of conversion-oriented marketing. All the digital marketing makeovers can also be quantified through powerful digital marketing tools like Kissmetrics, Google Analytics, Google Website Optimizer, etc. that make it one of the most result-oriented modes of marketing. There are more than 900 private TV channels and 250+ radio stations in India, which make traditional marketing quite expensive and highly confusing with lots of in-built vacillations. However, in today's world of internet, Digital Marketing is the only one and most guaranteed way of marketing, which is popularly being the most preferred space of marketing communications and related interactions.

Traditional media isn't going anywhere (though there are some real concerns about the future of print). But television and radio are safe and thriving. There's no shortage of brands who have advertising dollars earmarked for TV and radio.

In the case of the Super Bowl, the price of poker continues to rise. Digital marketing is a massive field with variety of career options. It is not only the future; it's a need of today. The opportunities for a Digital Marketing professional are huge in India right now.

1.3 ORGANISATIONAL PROFILE:

1.3.1 RAGE Communications:

At Rage Communications, they are totally focused on harnessing the Internet to help their clients meet their business objectives. Objectives as diverse as communication, e-commerce, advertising and brand promotion, lead generation, connecting with customers, employees, and vendors, carrying out surveys, transaction processing and work flow management.

1.3.2 MISSION:

“To be the Digital Transformers of Brands and Businesses Worldwide”

1.3.3 CLIENTS OF RAGE:

ABOUT RAGE:

Rage Communications is a Chennai-based full service web services and consulting firm FOUNDED in 1996, build websites and web based applications that are relevant to a client's needs. These encompass static websites, dynamic e-commerce platforms, interactive web applications, web based tools such as documentation systems, content management systems, online surveys, among others.

At Rage, clients can expect a complete offering based on the underlying business realities of our clients. Thus they blend the insights of consulting with the rigour of execution across the multiple business functions and skills that a truly rich web

experience requires. These disciplines cut across business analysis, communications, user experience, graphic design and technology.

They take great pride in the fact that they work across all possible permutations and combinations that the World Wide Web offers and are not limited by the just one facet of the Internet.

These client objectives span diverse areas, such as communication, e-commerce, advertising and brand promotion, lead generation, connecting with customers, employees, and vendors, carrying out surveys, transaction processing and work flow management, among others.

With an experience of more than 15 years, the company has worked on over 1000 web projects for a diverse range of clients ranging from Fortune 100 companies to small and medium businesses in all parts of the world.

STRENGTH:

They have learnt that building a website is not merely having the technology knowledge or having ace designers. To be a successful business tool all web activities - website design, website build, online marketing, analytics, network administration - need individuals with different skill sets coming together. Rage's staff, over 150 of them, bring to bear each of their individual abilities to make sure that a Rage designed online activity leads to high yields. Rage's team comprises

Professionals drawn from marketing, advertising and consulting backgrounds with 5+ years of business experience, Business Analysts determine the strategy to be adopted in consultation with the client and use the company resources to deliver the strategy. Their usability professionals comprise graphic designers, copywriters and content researchers who deliver online products so that they are aesthetically pleasing and the viewers can intuitively use the digital asset they have created.

In a world where there are multiple technology solutions for the same problem, their technologists encompass all web technologies. More than just being experts in one technology, they encourage the team members to develop skills in multiple areas so that a rich ground for innovation is created and sustained.

INNOVATIVE SOLUTION

RAGE is not run-of-the-mill digital agency. Besides the obvious services like social media consultancy, lead generation, viral campaigns and SEO/SEM services, Rage puts in a lot of effort in R&D and creating innovative services and solutions. One of Rage communications first in-house products, **Zozolo.com**, deals with **social commerce and social loyalty solutions**. Rage has a mobile division as well that develops mobile apps. One of Rage's incubated ventures, **Decidebay.com**, is set to have a **beta launch soon**. It is a **consumer review**.

1.3.4 MANAGING RELIABILITY IN PROCESS

Managing digital marketing will often need new skills, new staff, new technologies and new processes for marketing. It's a big change! They look at digital marketing governance the best way to structure teams and update processes in larger organisation. If its a team of one we can ignore this section! The bigger the organisation, the bigger the challenge

SERVICES IN RAGE :

E-COMMERCE APPLICATIONS

E-commerce sites can vary dramatically in complexity depending on the extent of functionality, automation, and analytical capability required by the web-marketer. Over the years, they have developed commerce and transactional solutions to meet a wide variety of client requirements.

WEBSITE DESIGN AND DEVELOPMENT

Since they incorporated in 1996, they have delivered for a diverse range of clients - from start-ups with dreams to the hard-nosed Fortune 10 corporations in all parts of the world.

ONLINE WORKFLOW APPLICATIONS

Many of the clients operate from multiple geographical locations and interact with partners and vendors around the globe. Their people work in teams that are widely dispersed. For teamwork to succeed, accurate and timely information flow across the entire system is a basic necessity.

ONLINE MARKETING

Their online marketing services are not just about converting offline promotions to the online format. The focus is on developing creativeness and campaigns that strategically take advantage of the online medium and cut through the clutter, to achieve high impact levels for the target audience. Our objective is to drive direct response and build brands effectively.

SEARCH MARKETING

An estimated 80% of all traffic on the internet is generated through Search Engines, and 90% of all users do not look beyond the first 30 results. Therefore an SEO strategy needs to be aimed at achieving the highest possible rankings.

1.4 OBJECTIVES OF STUDY

1.4.1 PRIMARY OBJECTIVE

- To study the leverage of digital marketing using new age channels with which the target audience uses to consume information in rage.

1.4.2 SECONDARY OBJECTIVES

- Foundation of digital marketing relies on secondary research on the information gathered by other sources, which appear to be applicable to their products.
- The secondary objective of marketing research is base on the knowledge accumulated from other sources that seem to be relevant to the product and services.
- No longer are businesses bound by the limitations of traditional marketing techniques.

1.5 SCOPE OF STUDY

Digital Marketing is so much more than E-Commerce and the only way for someone who is interested to learn about it, is through self-effort and a handful of institutes like Web Marketing Strategies (WMA). At WMA, We(RAGE) are looking to make some progress on this front, and after evangelizing for a few year.

1.6 SIGNIFICANCE OF STUDY

Digital media helps brands reach consumers to engage with their product or service in a personalised way. Five areas, which are outlined as current industry practices that are often ineffective are prioritizing clicks, balancing search and display, understanding mobiles, targeting, view ability, brand safety and invalid traffic, and cross-platform measurement. These practices are ineffective and some ways around making these aspects effective are discussed surrounding the following points. Digital marketing is a massive field with variety of career options. It is not only the future; it's a need of today. The opportunities for a Digital Marketing professional are huge in India right now

PRIORITIZING CLICKS

Prioritizing clicks refers to display click ads, although advantageous by being 'simple, fast and inexpensive' rates for display ads in 2016 is only 0.10 percent in the United States. This means one in a thousand click ads are relevant therefore having little effect. This displays that marketing companies should not just use click ads to evaluate the effectiveness of display advertisements.

BALANCING SEARCH AND DISPLAY

Balancing search and display for digital display ads are important; marketers tend to look at the last search and attribute all of the effectiveness to this. This then disregards other marketing efforts, which establish brand value within the consumers mind. ComScore determined through drawing on data online, produced by over one hundred multichannel retailers that digital display marketing poses strengths when compared with or positioned alongside, paid search. This is why it is advised that when someone clicks on a display ad the company opens a landing page, not its home page.

UNDERSTANDING MOBILES

Understanding mobile devices is a significant aspect of digital marketing because smart phones and tablets are now responsible for 64% of the time US consumers are online. Apps provide a big opportunity as well as challenge for the marketers because firstly the app needs to be downloaded and secondly the person needs to actually use it. This may be difficult as 'half the time spent on smart phone apps occurs on the individuals single most used app, and almost 85% of their time on the top four rated apps.

CROSS PLATFORM MEASUREMENT

The number of marketing channels continues to expand, as measurement practices are growing in complexity. A cross-platform view must be used to unify audience measurement and media planning. Market researchers need to understand how the Omni-channel affects consumer's behaviour, although when advertisements are on a consumer's device this does not get measured.

SIGNIFICANCE:

The massive penetration of digital technology is pushing communications to an advanced level, resulting in the creation of virtuous data systems to transform the way we make, sell and buy. The Internet fast emerged from a modest research network to a robust commercial infrastructure with an exponentially growing number of user base. Consequently, novel business functionalities such as E-Commerce and Digital Marketing are redefining the way businesses reach and interact with customers.

IMPACT ON BUSINESSES

Digital Marketing allows businesses to reinvent their marketing strategies to better connect with target customers and to stay relevant in the customer's perspective. In the process, businesses leverage the technology-enabled tools such as emails, blogs and social media to expand the reach of their offerings.

CAPITALIZING ON TALENT GAPS

Aspiring students and marketing professionals now have rewarding career opportunities with huge pay packages within this arena. Graduate and postgraduate students can choose from a broad array of course options to improve their skills. However, one should first understand what specific role would best suit them to gain a competitive edge.

WHAT TO EXPECT

Digital Marketing industry is very dynamic with complex situations arising every day. A typical marketing team is expected to constantly observe brand performance across numerous channels, dynamically respond to varying customer expectations, analyze data, make decisions and improve the user experience. With exciting growth potential and challenging tasks, the industry offers a platform for constant learning and unique experiences.

1.7 LIMITATIONS OF THE STUDY

The study is limited only to Rage communications. Online marketing is not free as the cost of hardware, software, web site design, online distribution costs, maintenance hosting of website and yes time, all should be factored into the cost of providing the product and service.

Still, the internet is considered as a source of information gathering for the majority of your customers. Many people are there who still prefer the live interaction when they buy. This may deter customers from buying if you have a small business with one location

Despite the quick penetration, wider customer base and other potential benefits, few businesses, including small and large face trouble in using digital technology to effectively communicate their brand information. One of the fundamental concerns is several companies fail to appreciate the need to invest in resource training and technology.

CHAPTER II

COMPANY PROFILE

2.1.1 STRATEGIES:

Marketing strategies that were adopted several decades back can't be reliable today. It's the digital age and everything in the world of technology is fast evolving. This has affected marketing strategies the most. Marketing strategies available today are almost entirely directed towards digital perceptions. With exponential growth in internet access, companies are leveraging online platforms to showcase their products and services. They have, in fact, re-strategized their marketing bottom lines and have embraced digital technologies. The ways in which companies reach out to their customers today were unthinkable even some years ago.

Just know that a good digital marketing strategies doesn't mean how many gadgets and neologisms you cram into it. How effectively your marketing strategies can achieve its goals, is the most important thing. As a result, the way you define your intent will impact whether you succeed or fail in your endeavour. There are organizations that reaffirm faith in this concept and believe that success can be attained only via customer satisfaction.

The thought stems from the fact that customers are only interested in products and services useful to them. Not in the drumbeating of the things you can do. Companies today don't sell what they can make. It's the other way round. They make what they can sell. All their efforts are directed to acquire new customers and resorting to digital platforms makes sense because of the easy availability of devices like tabs and smart phones.

2.1.2 Definition:

Strategy is an action that managers take to attain one or more of the organization's goals. Strategy can also be defined as "A general direction set for the company and its various components to achieve a desired state in the future. Strategy results from the detailed strategic planning process"

2.1.3 New Age Strategies

1. Google Search

Codenamed 'Hummingbird', the changes to Google's algorithm means keywords are no longer important and that greater preference is given to the content hosted on a site. Google search will now act more like a human being, giving better content a higher ranking.

As a result of this latest change, the sheer number of new Top Level Domains entering the root of the Internet coupled with Google's new focus on content quality will mean marketers need to rethink existing websites. Authentic domains in new TLDs that are related to their content and business category are more likely to rank higher in organic search and help marketers control the internet traffic for their brand.

2. Cookies

Recently, Microsoft, Face book, Google and others have started to use their own technology to track customers instead of cookies. This will allow these companies to better monitor what their customers are doing on their websites and develop campaigns that target users accordingly.

3. Domain Names

Individual domain names will also grow with importance. Digital marketers need to take a holistic approach to their overall online strategy, including acquiring domain names that will resonate with a particular audience or campaign. The TLDs add one more element to the online marketing equation while simultaneously providing a catalyst for creativity.

While the world is transitioning into digital so are quite many businesses. In fact today digital media is at the very forefront of marketing leaving behind age-old traditional media such as newspapers, TV broadcasting and radio advertising.

Digital Media has turned into an important player in the marketing field and it is important for start-ups and small scale businesses to realize its true and massive potential. Digital media is constantly morphing and evolving into meeting our advertising and marketing needs leaving us with endless prospects.

The reason most companies today are opting for a social media marketing strategy is because it is proving to reap great benefits for not only marketers but also consumers.

2.1.4 Customer Expectation of Services in Digital Marketing

Internet is changing the customer's expectations as well as behaviour. Understanding the customer behaviour pattern holds the key to successful online business for Companies. Companies have begun to realise that the product as well as marketing strategies that work for traditional sales channels do not hold good for their E Commerce business models.

We now see that Organisations are slowly moving away from focussing on product technology, production efficiency as well as cost reduction strategies and getting to understand their product delivery and services from the E Customer's perspective. E Customer's perspectives are forcing the E Commerce companies to change the value proposition of their business. The Customer's perception of value is what holds good in the E Commerce scenario and the Companies have got to re engineer their business strategies as well as functions in line to deliver the so called 'Value Innovation.

Generally speaking, all customers who are browsing the internet looking to make a purchase are looking to finish with the purchase immediately due to lack of time. The time and speed as well as convenience of the e business model is what is prompting them to opt for online purchase. The next criterion that drives the customer to buy online is the fact that they are able to quickly check out the rates amongst competition and go for the cheapest deal.

At this stage the quality of the product or service is already taken for granted that it is expected to be nothing but the best. The other factor that helps the customer go for the 'click' perhaps is the familiarity of the brand.

2.1.5 Three levels of expectations

The Consumer Must Always Come First

Shifting company perspective to more closely match that of the consumer's needs is becoming main stream. If there's one thing to remember from this lesson, it's that consumers are far less tolerant with companies because they don't have to be. They're no longer required to put up with one particular company. If they don't like things, they can easily move on to a competitor or big box store for the same products and services.

Essentially, the customers get to call the shots. They know what they want. More than that, they know you'll give it to them if you want to stay in business. For that reason, the consumer must always be at the forefront of your operations.

The Customer Voice Reaches Much Farther Now

Thanks to social media, the internet, and mobile technology, consumer-to-consumer dialogue has grown exponentially. In the past, consumers could only share their opinions about a particular business with family, close friends, and neighbours. These discussions were generally limited to the phone numbers in a person's address book.

Now, a single tweet can be re tweeted and shared across the web, with the potential to reach millions. With that kind of power, it puts a lot of pressure on companies to ensure their customers have great experiences. Otherwise, they have the potential to lose customers quickly and have tarnished reputations, all thanks to one seemingly insignificant social media post.

The User's Opinion Must Be Taken Into Consideration

It's essential in today's marketplace to respect the user's opinion and take it into consideration when altering products and marketing tactics. Customers have a lot of options for making purchases, and if you aren't listening to their demands, they'll find a company who will.

Companies must go out of their way to gain customer insights and include them in their evolving strategies. Surveys, social interaction, big data collection, and customer service

experiences can all yield information that can be used for the betterment of your company.

Today, customers have the power to tell you how your company should be running and what services you should be offering. Those who take such insights seriously are those who will excel in their chosen markets.

2.2 RESEARCH REVIEW

➤ **Hoffman et al (1995)** were the first researchers to propose a structural framework for examining the development of commercial activity on the Web. They explored the Web's role both as a distribution channel and as a medium for marketing communication, evaluated the resulting benefits to consumers and firms, and discussed the barriers to its commercial growth from both supply and demand side perspectives. They proposed that the interactive nature of the Web freed customers from their traditional passive role as receivers of marketing communications, giving them access to greater amounts of dynamic information to support decision making.

➤ **Hoffman et al** also identified benefits for firms, not only in the delivery of information but also in the development of customer relationships. The impact that interactive shopping might have on consumer behaviour, and on retailer and manufacturer revenue generation, was addressed by **Alba et al (1997)**. They considered the relative attractiveness to consumers of alternative retail formats. They noted that technological advances offered consumers unmatched opportunities to locate and compare product offerings, but that price competition may be mitigated by the ability of consumers to search for more differentiated products better fitted to their needs.

➤ The authors examined the impact of the Internet as a function of both consumer goals and product/service categories and explored consumer incentives and disincentives to purchase online versus offline. The paper also discussed implications for industry structure in terms of competition between retailers, competition between manufacturers, and retailer-manufacturer relationships. It concluded with a list of research questions raised by the advent of interactive home shopping. Continuing the theme of interactive shopping, **Peterson et al (1997)** analyzed channel intermediary functions that could be

performed on the Internet, classified its potential impact by category type, discussed how price competition might evolve, and suggested a framework for understanding its possible impacts on marketing to consumers.

➤ 7 Building on the framework for classifying Internet commerce sites suggested by **Hoffman et al (1995)**, **Spiller and Lohse (1998)** surveyed 44 website features across a convenience sample of 137 women's apparel retail sites. Using cluster and factor analysis they identified five distinct web catalogue interface types: superstores, promotional stores, plain

➤ sales stores, one page stores, and product listings. Differences between online stores centered on size, service offerings, and interface quality. Turning to more narrowly focused research, **Berthon et al (1998)** developed a conceptual framework for evaluating a business-to-business (B2B) website as a marketing communication channel.

➤ Network methods and analysis tools have been proposed by **Iacobucci (1998)** as useful for examining interactive marketing systems. She describes the content properties of interactive marketing: technology, intrinsic motivation, use of interactive marketing information, and the real-time aspect of interaction, together with the structural properties of interactive marketing: customization, responsiveness, interactions amongst relevant groups, and a structure of networked networks. She suggests that interactive marketing is network and can therefore be analyzed using the tools developed to help understand the meaning of intricate network structures. Increasingly from the late 1990s new and existing theories have been tested empirically using experimentation, consumer surveys, or actual browsing/purchasing behaviour. The rest of this chapter reviews the empirical evidence to-date our range communications.

CHAPTER III

LITERATURE REVIEW

Research in common parlance refers to a search for knowledge. One can also define research as a scientific and systematic search for pertinent information on a specific topic. In fact, research is an art of scientific investigation.

The Advanced Learner's Dictionary of Current English lays down the meaning of research as "a careful investigation or inquiry especially through search for new facts in any branch of knowledge." Redman and Mory define research as a "systematized effort to gain new knowledge." Some people consider research as a movement, a movement from the known to the unknown. It is actually a voyage of discovery.

According to Clifford Woody research comprises defining and redefining problems, formulating hypothesis or suggested solutions; collecting, organizing and evaluating data; making deductions and reaching conclusions; and at last carefully testing the conclusions to determine whether they fit the formulating hypothesis.

D.Slesinger and M.Stephenson in the Encyclopedia of Social Sciences define research as "the manipulation of things, concepts or symbols for the purpose of generalizing to extend, correct or verify knowledge, whether that knowledge aids in construction of theory or in the practice of an art."

Research is, thus, an original contribution to the existing stock of knowledge making for its advancement. It is the pursuit of truth with the help of study, observation, comparison and experiment. In short, the search for knowledge through objective and systematic method of finding solution to a problem is research.

3.1.1 Descriptive vs Analytical:

Descriptive :

Descriptive research includes surveys and fact finding enquiries of different kinds. The major purpose of descriptive research is description of the state of affairs as it exists at present. In social science and business research we quite often use the term Ex post facto research for descriptive research studies. The main characteristic of this method is

that the researcher has no control over the variables; he can only report what has happened or what is happening.

Most expose factor research projects are used for descriptive studies in which the researcher seeks to measure such items as, for example, frequency of shopping, preferences of people, or similar data. Ex post facto studies also include attempts by researchers to discover causes even when they cannot control the variables. The methods of research utilized in descriptive research are survey methods of all kinds, including comparative and co relational methods. In *analytical research*, on the other hand, the researcher has to use facts or information already available, and analyse these to make a critical evaluation of the material.

3.2 RESEARCH APPROACHES

Experimental approach is characterized by much greater control over the research environment and in this case some variables are manipulated to observe their effect on other variables. *Simulation approach* involves the construction of an artificial environment within which relevant information and data can be generated. This permits an observation of the dynamic behaviour of a system (or its sub-system) under controlled conditions. The term ‘simulation’ in the context of business and social sciences applications refers to “the operation of a numerical model that represents the structure of a dynamic process.

Given the values of initial conditions, parameters and exogenous variables, a simulation is run to represent the behaviour of the process over time.” Simulation approach can also be useful in building models for understanding future conditions. Qualitative approach to research is concerned with subjective assessment of attitudes, opinions and behaviour. Research in such a situation is a function of researcher’s insights and impressions. Such an approach to research generates results either in non-quantitative form or in the form which are not subjected to rigorous quantitative analysis. Generally, the techniques of focus group interviews, projective techniques and depth interviews are used.

3.2.1 DATA COLLECTION PROCEDURE

The sources of recruitment are broadly divided into Internal Sources and External Sources. Internal Sources are the sources within organizational pursuits. The primary data is collected with direct interaction with candidates through questionnaire and personal interview. The questionnaire consists of closed ended and open-ended questions. External Sources are sources outside organizational pursuits.

Research is often described as an active, diligent and systematic process of inquiry aimed at discovering, interpreting and revising facts. This intellectual investigation produces a greater understanding of events, behaviours or theories and makes practical applications through laws and theories. The term research is also used to describe a collection of information about a particular subject, and is usually associated with science and scientific method.

To the owners of a business, what counts is how much cash it is generating. To determine the real cash flows, Research uses a form of forensic accounting to decode financial statements, combining some of the best and most timely databases available with modern information technology tools. Although cash flow analysis has gained many converts and exponents in the quarter-century since it pioneered the practical application of these concepts, Its approach is unique in its elegant simplicity and empirical validation.

3.3 RESEARCH DESIGN

Research design is the conceptual structure with in which research would be conducted. The function of the research design is to provide the collection of relevant evidence with minimum expenditure of efforts, time and money. The suitable design is the one that minimizes bias and maximizes the reliability of the data collected and analyzed.

A Research design is plan that specifies the objectives of the study, method to be adopted in the collection of the data, tools in analysis of data and helpful to frame hypothesis. “A research design is the arrangement of condition for collection and analysis of data in a manner that aims to combine relevance to research purpose with economy in procedure”.

Research design is needed because it facilitates the smooth sailing of the various project operations, thereby making the project as efficient as possible yielding maximal information with minimal expenditure of effort time and money. Also it minimizes bias and maximizes the reliability of the data collected.

3.3.1 RESEARCH PLAN: -

Research Approach: SURVEY METHOD

PRIMARY SOURCE

Primary data consists of original information gathered for specific purpose. The primary data is collected through questionnaire.

The questionnaire is through common instrument collecting primary collection. I collected the data through questionnaire.

3.3.2 RESEARCH INSTRUMENT

The research instruments used for collecting the primary data were the questionnaire.

QUESTIONNAIRE

The questionnaire was carefully developed tested and debugged before they were administered on a large scale. Each questions contributed to the research objective here questionnaire is structured types means there are definite and predetermined questions.

3.4. DATA SOURCE:

Primary:

The data was collected through questionnaire comprising of 15 questions.

Secondary:

The data was collected through Scholarly articles, Company website and Journals

Data Collection Instrument:

Closed Ended Questionnaire

Sampling Procedure:

Research type : Descriptive Research

Sample size : 53 (large sample)

Sampling type: Convenience sampling.

3.5 RESEARCH FOCUS

The focus of this research is to the effectiveness of new age strategies in digital marketing with focus on acquisitional strategies based on the survey criteria chosen by Rage communication division; specifically the client meets their business objectives by offering a host of digital and online services such as web design and development, e-commerce application, online marketing, online application marketing, site and server management and web analytics. This may serve as a general foundation for the concept of measuring employee issues and satisfaction for other organizations.

The first step is to formulate a research design. This means planning a strategy of conducting research. It is a detailed plan of how the goals of research will be achieved. Research design is exploratory, descriptive and/or experimental in nature. It is helping the investigator in providing answers to various kinds of social/economic questions. After collecting and analysis of the data, the researcher has to accomplish the task of drawing inferences.

Only through interpretation researcher can expose relations and processes that underlie his findings and ultimately conclusions. Interpretation refers to the task of drawing inferences from the collected facts after an analytical study. It is a search for broader meaning and research findings.

It is the device through which factors that seem to explain what has been observed by researcher in the course can be better understood and provides theoretical conception which serve as a guide for further researches. It is essential because it will lead towards findings of the study and proper effective conclusions of the study.

3.6. TOOLS USED IN THE ANALYSIS:

Bar Chart:-A chart in which the length of the bar represents the amount of the item associated with the bar.

STATISTICAL TOOLS USED IN THE ANALYSIS:

1) PERCENTAGE ANALYSIS:

In the case of multiple choice questions the responses are categorized based on the nature and percentage, and is calculated for each category.

To find the percentage of the responses in each category percentage analysis is used. The percentage is calculated by dividing the number of responses by the total number of respondents.

$$\text{Percentage of the respondents} = \frac{\text{Number of respondents}}{\text{Total number of respondents}} * 100$$

2) CHI SQUARE ANALYSIS:

The Chi-Square test of Independence is used to determine if there is a significant relationship between two nominal (categorical) variables. The frequency of one nominal variable is compared with different values of the second nominal variable.

CHAPTER IV
RESEARCH METHODOLOGY

TABLE NO: 4.1.1

In this chapter an attempt has been made to analyse and interpret the data collected

4.1 PERCENTAGE ANALYSIS

Table showing the gender of respondents

Gender	Frequency	Percent
Male	43	81.1
Female	10	18.9
Total	53	100.0

CHART NO: 4.1.1 Figure showing the gender of respondents

INTERPRETATION:

From the above table it is found that 81.1% of employees belong to male gender and 18.9% of employees to the gender of female. Therefore, majority of the respondents are male.

TABLE 4.1.2

Table showing the age of the respondents

Age	Frequency	Percent
18-22	5	9.4
23-30	32	60.4
30-45	14	26.4
above 45	2	3.8
Total	53	100.0

CHART NO: 4.1. Figure showing the age of the respondents

INTERPRETATION:

From the above table it is found that 9.4% of employees belongs to the age group of 18-22 years, 60.44% of employees belongs to age group of 23-30 years, 26.4% of employees belongs to the age group of 30-45 years, 3.8% of employees are belongs to the age group more than 45 years.

TABLE 4.1.3

Table showing the purchasing frequency in online of the respondents

Purchasing frequency	Frequency	Percent
1-2 times	49	92.5
3-4 times	4	7.5
Total	53	100.0

CHART 4.1.3 Figure showing the purchasing frequency in online of the respondents

INTERPRETATION:

People have a tendency to purchase online. From the above table 95.2% of the respondents purchase 1-2 times in online and the remaining 7.5% of the respondents purchase 3-4 times in online. And therefore people likes digital marketing now-a-days, so they can satisfy their needs and wants through digital marketing

TABLE 4.1.4

Table showing the socio-economic state of the respondents

Socio economic status	Frequency	Percent
Student	8	15.1
Employed	43	81.1
Self employed	1	1.9
Others	1	1.9
Total	53	100.0

CHART 4.1.4 Figure showing the socio-economic state of the respondents

INTERPRETATION :

From the above table it is found that 1.9% of them are self-employed, 15.1% of them are students and 81.1 of them are employed and remaining 1.9% of them are other category people

TABLE 4.1.5

Table showing the business follow frequency in social media services of the respondents

Business follow Frequency	Frequency	Percent
1-5 times	37	69.8
6-10 times	5	9.4
11-15 times	2	3.8
More than 15 times	9	17.0
Total	53	100.0

CHART 4.1.5 Figure showing the business follow frequency in social media services of the respondents

INTERPRETATION:

From the above table it is found that 69.8% of the respondents are following the social media services 1-5 times, 9.4% of the respondents are following 6-10 times, 3.8% of the respondents are following 11-15 times and the rest of the 17.0% respondents are following more than 15 times. Thus digital marketing helps the respondents more to follow the companies and businesses.

TABLE 4.1.6

Table showing hours spent in networking sites

Hours spent	Frequency	Percent
0-5 hours	23	43.4
6-10 hours	15	28.3
11-20 hours	9	17.0
21-30 hours	6	11.3
Total	53	100.0

CHART 4.1.6 Figure showing hours spent in networking sites

INTERPRETATION:

From the above table it is found that 43.4% of respondents spend 0-5 hours and 28.3% spend 6-10 hours and only less spend more hours

TABLE 4.1.7

Table showing Benefits of networking sites by the respondents

Benefits networking sites	Frequency	Percent
Always	17	32.1
Sometimes	29	54.7
Never	4	7.5
Often	3	5.7
Total	53	100.0

CHART 4.1.7 Figure showing Benefits of networking sites by the respondents

INTERPRETATION:

From the above table it is found that 32.1% respondents always get benefits out of networking sites. 54.7% only find it helpful sometimes and 7.5% never find it useful.

TABLE 4.1.8

Table showing Benefits of marketing in social media of the respondents

Benefits	Frequency	Percent
Branding	15	28.3
Customer gain	6	11.3
Awareness	21	39.6
New products	11	20.8
Total	53	100.0

CHART 4.1.8 Figure showing Benefits of marketing in social media of the respondents

INTERPRETATION:

From the above table 28.3% of the respondents find the benefits of marketing to be branding, 11.3 % of the respondents find it as customer gain, 39.6% of the respondents find it as awareness and the remaining 20.8% of the respondent finding it as new products. Therefore posting on social media might get your business some site traffic, more effort than that is required to see significant success.

TABLE 4.1.9

Table showing the advertisement frequency in face book page of the respondents

Ads frequency	Frequency	Percent
Always	2	3.8
Sometimes	18	34.0
Never	30	56.6
Often	3	5.7
Total	53	100.0

CHART 4.1.9 Figure showing the advertisement frequency in face book page of the respondents

INTERPRETATION:

From the above table it is found that 3.8% of the respondents always post the ads in face book page, 34.0% of the respondents sometimes post the ads in face book page, 56.6% of the respondents never post the ads in face book page and the remaining 5.7 of the respondents often post the ads in face book page. Therefore ads are being snubbed by the busy users most especially if the ads are dull and plain

TABLE 4.1.10

Table showing blog usage frequency of the respondents

Blog usage frequency	Frequency	Percent
Always	3	5.7
Sometimes	25	47.2
Never	17	32.1
Often	8	15.1
Total	53	100.0

CHART 4.1.10

Figure showing blog usage frequency of the respondents

INTERPRETATION

From the above table it is found that 5.7% of the respondents using the blogs always, 47.2% of the respondents use the blog sometimes, 32.1% of the respondents never use the blogs and remaining 15.1% of the respondents often use the blogs. Therefore 79.3 %of the respondents use digital marketing through internet and the rest of 20.7% of the respondent will never use internet.

4.2 CHI SQUARE TEST

4.2.1 Gender * Hours spent cross tabulation

Null hypothesis:

Ho: There is no significant relationship between Gender and Hours spent on networking sites

Alternate Hypothesis:

H1: There is significant relationship between Gender and Hours spent on networking sites

Gender * Hours spent Cross tabulation

			Hours spent				Total
			0-5 hours	6-10 hours	11-20 hours	21-30 hours	
Gender	Male	Count	18	11	9	5	43
		Expected Count	18.7	12.2	7.3	4.9	43.0
	Female	Count	5	4	0	1	10
		Expected Count	4.3	2.8	1.7	1.1	10.0
Total	Count		23	15	9	6	53
	Expected Count		23.0	15.0	9.0	6.0	53.0

Chi-Square Tests

	Value	df	Asymp. Sig. (2-sided)
Pearson Chi-Square	2.832 ^a	3	.418
Likelihood Ratio	4.447	3	.217
Linear-by-Linear Association	.788	1	.375
N of Valid Cases	53		

a. 5 cells (62.5%) have expected count less than 5. The minimum expected count is 1.13.

INFERENCE:

From the above Chi Square Table:

0.418 > 0.05

Thus we accept null hypothesis. There is no significant relationship between Gender and Hours spent on Networking sites.

4.2.2 Socioeconomic status * Purchasing Frequency Cross tabulation

Ho: There is no significant relationship between socio economic status and the online purchasing frequency

H₁: There is significant relationship between socio economic status and the online purchasing frequency

Socioeconomic status * Purchasing Frequency Cross tabulation

			Purchasing Frequency		Total
			1-2 times	3-4 times	
Socioeconomic status	student	Count	7	1	8
		Expected Count	7.4	.6	8.0
	Employed	Count	40	3	43
		Expected Count	39.8	3.2	43.0
	Self-employed	Count	1	0	1
		Expected Count	.9	.1	1.0
	Others	Count	1	0	1
		Expected Count	.9	.1	1.0
	Total	Count	49	4	53
		Expected Count	49.0	4.0	53.0

Chi-Square Tests

	Value	df	Assume. Sig. (2-sided)
Pearson Chi-Square	.465 ^a	3	.927
Likelihood Ratio	.573	3	.903
Linear-by-Linear Association	.435	1	.509
N of Valid Cases	53		

a. 6 cells (75.0%) have expected count less than 5. The minimum expected count is .08.

INFERENCE:

From the above Chi Square Table: $0.927 > 0.05$

Thus we accept null hypothesis. There is no significant relationship between socio economic status and the online purchasing frequency

CHAPTER V
DATA ANALYSIS AND INTERPRETATION

- 81.1% of employees are male and 18.9% of employees are females. Therefore, majority of the respondents are male.
- 9.4% of employees belongs to the age group of 18-22 years, 60.44% of employees belongs to age group of 23-30 years, 26.4% of employees belongs to the age group of 30-45 years, 3.8% of employees belongs to the age group more than 45 years.
- People have a tendency to purchase online. 95.2% of the respondent purchase 1-2 times in online and the remaining 7.5% of the respondent purchase 3-4 times in online. And therefore people likes digital marketing now-a-days, so they can satisfy their needs and wants through digital marketing
- 1.9% of them are self-employed, 15.1% of them are students and 81.1 of them are employed and remaining 1.9% of them are others
- 69.8% of the respondents are following social media services 1-5 times,9.4% of the respondents are following 6-10 times,3.8% of the respondents are following 11-15 times and the rest of the 17.0% respondents are following more than 15 times. Thus digital marking helps the respondents more to follow the companies and businesses.
- 28.3 of the respondents find the benefits of marketing to be branding, 11.3 % of the respondents as customer gain, 39.6 of the respondents as awareness and the remaining 20.8% of the respondent appoint new products. Therefore posting on social media might get your business some site traffic, more effort than that is required to see significant success.
- 3.8% of the respondents always post the ads in face book page,34.0% of the respondents sometimes post the ads in face book page,56.6% of the respondents never post the ads in face book page and the remaining 5.7 of the respondents often post the ads in face book page. Therefore ads are being snubbed by the busy users most especially if the ads are dull and plain
- 5.7% of the respondents use the blogs always, 47.2% of the respondents use the blog sometimes, 32.1% of the respondents never use the blogs and remaining 15.1% of the respondents often use the blogs. Therefore 79.3 of the respondents use digital marketing through internet and the rest of 20.7% of the respondent will never use internet.

5.2 SUGGESTIONS

- Majority of the employees prefer Digital marketing through internet. Hence companies must be focusing high on Digital marketing technologies.
- Only people of the age group by 23-30 are more into social media marketing. Hence people or employees must be given awareness about the usage of digital networking to fine tune the business.
- Most of the customers purchase online .So this medium can be enhanced more with more customer friendly options
- Most of the face book ads are unnoticed by the customers. Hence the face book and other social media ads should be displayed in the right way so as to catch the attention of the customers
- The social media sites and websites should be made mobile friendly
- A business blog can be a winning addition to the website. It can help boost the site's SEO.

5.3 CONCLUSION

As generations evolve and technology develops, the advancement in the field of marketing and advertisements has been immense. No longer are businesses bound by the limitations of traditional marketing techniques. The old has been heavily replaced by the new. One of the newest and most effective strategies has been of Digital marketing

This method of marketing has lifted the business domain to new heights. The limitations of internet marketing are few in number, while the advantages are sure to boost any business up towards the most fantastic and profitable opportunities.

Modern market has transferred to the online world where companies can now reach customers worldwide, using different forms of online marketing. Not only does this increase the potential market and the number of potential customers, but it also provides companies with the chances of establishing the position on global market and thus reaching for greater success and achievement of long-term goals.

ANNEXURE

APPENDICES

QUESTIONNAIRE

Organisation Name_____

1) Name :

2) Gender : a) Male b) Female

3) Age :

a)18-22

b) 23-30

c) 30-45

d) 45 and above

4) Socio-economic state :

a) Student

b) Employed

c) Self-Employed

d) Others

5) How many hours do you spend in social networking sites in a week :

a) 0-5 Hours

b) 6-10 Hours

c) 11-20 Hours

d) 21-30 Hours

6) How many times do you purchase online in a week

- a) 1-2 times
- b) 3-4 times
- c) 5-6 times
- d) More than 7 times

7) How many company/business do you follow through social media services

- a) 1-5 times
- b) 6-10 times
- c) 11-15 times
- d) More than 15 times

8) Which is your default search engine

- a) Google
- b) Yahoo
- c) Bing
- d) AOL

9) In what way social media helps in marketing

- a) Branding
- b) Customer Gain
- c) Awareness
- d) New Products

10) How often do you post ads in your facebook page

- a) Always
- b) Sometimes
- c) Never
- d) Often

11) In a typical day, how likely are you to use blogs ?

- a) Always
- b) Sometimes
- c) Never
- d) Often

12) Do you find social networking sites use full in branding

- a) Always
- b) Sometimes
- c) Never
- d) Often

13) Do you go to the second page on search ?

- a) Always
- b) Sometimes
- c) Never
- d) Often

14) Do you click on sponsored links

- a) Always
- b) Sometimes
- c) Never
- d) Often

15) Do you read the description below the search link ?

- a) Always
- b) Sometimes
- c) Never
- d) Often
